Grant Industries gets a used press and refurbished AirLoc Wedgmounds®

Grant Industries Inc. takes great pride in offering high quality stampings, clips, and assemblies to the automotive industries. Rob Grant, president, purchased a used Minster 800 ton stamping press earlier this year with AirLoc 11VRC Wedgmounds®. The AirLoc mounts were not new but basically needed only pads to bring them up to "like new" condition. AirLoc older style 5P1 worn pads were replaced with new 725 high-damped pads and two 11-VRC / 725 Wedgmounds were installed under each foot of the Minster press. Rob Grant reports that the installation went well and he is pleased with the mounts performance.

AirLoc Wedgmound Precision Levelers are available in a wide range of sizes with load support from 100 to 220,000 pounds per mount, and freestanding, bolt-on, and bolt-through attachment capabilities. With a variety of pad types and thicknesses available, the Wedgmound series is suitable for all types and sizes of presses and machine tools.
