

## ***AirLoc Application News...***

### **AirLoc introduces it's new PRS & PRSK Jacmount® Adjustable Leveler Series**

AirLoc has developed a new Jacmount® leveler series designated Type PRS and PRSK to meet the precise positioning requirements and vibration isolation of fully automated equipment. The rugged design, with adjustable load plate will not come apart during installation or relocation of machinery. The integrated components are interlocking and well suited for applications with high horizontal forces. When used with AirLoc high-damping pads, sensitive equipment is isolated from potentially damaging shock and vibration.

PRS and PRSK Jacmounts® are ideally suited for machinery such as:

- Injection molding machines and granulators
- Grinders and milling machines
- Cutting and piercing machines
- Measuring and inspection equipment
